

Java Data Types

```
int num = 15;  
float f_num = 7.86f;  
char letter = 'Y';  
boolean bool = false;  
String text = "Priya";
```

Data types are divided into two groups:
Primitive data types - includes byte, short, int, long, float, double, boolean and char.

Non-primitive data types - such as String, Arrays and Classes.
